Jorge Luján Rodríguez – CV

Jorge Luján Rodríguez
Chihuahua, MX
Email: jorge_rdgzg90@hotmail.com | GitHub: github.com/j0rg312 | Portfolio: https://ika.mx/home

Professional Summary

Computer Systems Engineering student with strong academic background and practical experience in full-stack development. Skilled in building modern web applications using Angular, React, Spring Boot, and Docker, with solid knowledge of database management and cloud-based architectures.
Particularly interested in research related to **distributed systems, cloud computing, artificial intelligence, and human-computer interaction**. Open to contributing to collaborative research projects through Mitacs Globalink.

Technical Skills

- **Frontend:** Angular, React, Vite.js, Tailwind CSS, Bootstrap
- **Backend:** Spring Boot, Node.js, NestJS
- **Databases:** PostgreSQL, MySQL
- **DevOps & Tools:** Git, GitHub, GitLab, Docker, Docker Compose
- **API Testing:** Postman, Insomnia, Thunder Client
- **Languages:** Spanish (Native), English (Intermediate – B2)

Education

B.S. in Computer Systems Engineering
Instituto Tecnológico de México – Campus Chihuahua II
Chihuahua, MX | *2021 – Present*

- GPA: [⬅️ aquí agrega tu promedio si es ≥ 85/100]
- Relevant coursework: Data Structures, Databases, Operating Systems, Software Engineering, Artificial Intelligence.

Experience

Full Stack Developer (Freelance / Practical Experience)
Remote | Aug 2023 – Present

- Developed a customizable dashboard with drag-and-drop functionality and persistent user-specific layouts.
- Designed and implemented a dynamic media system replacing hardcoded assets, enabling real-time content management.
- Redesigned application UI/UX with accessibility features and dark mode for enhanced usability.

- Deployed a multi-service architecture with Docker Compose, including Angular frontend, Spring Boot backend, NestJS microservice, PostgreSQL database, and pgAdmin.
- Currently exploring Kubernetes for container orchestration and scalability.

Academic & Personal Projects

IKA – Personal Website

- Built a responsive portfolio site using React and Vite.js; deployed via Netlify to showcase frontend capabilities.

Inventory Management System (University Project, In Progress)

- Designed and implemented backend architecture using Spring Boot and MySQL.
- Focused on relational database design, API development, and frontend integration with Vite.js.

Workout Dashboard (Personal Project, In Progress)

- Developing a full-stack application for workout routine tracking using Spring Boot, PostgreSQL, Docker, and React with Ionic.
- Backend API and database completed; frontend development in progress.
- Emphasis on structured data storage, user interaction design, and performance optimization.

Research Interests

- Distributed Systems & Cloud Computing
- Artificial Intelligence & Data Analysis
- Human-Computer Interaction
- Software Engineering & Scalable Web Applications
