PROFESSIONAL SUMMARY

Computer Systems Engineering student (expected graduation: Summer 2027) and Full Stack developer with experience building enterprise software since 2023. Focused on Java/Spring Boot and React/Next.js, with experience in REST API design, PostgreSQL, Docker, and Clean/Hexagonal architectures.

TECHNICAL SKILLS

- **Programming Languages:** Java, TypeScript, JavaScript, Python, SQL
- **Frontend:** React, Next.js, Angular, Tailwind CSS
- **Backend:** Spring Boot, Node.js, NestJS, FastAPI
- **Databases:** PostgreSQL, MySQL, Supabase
- **Generative AI:** Google Gemini AI
- **DevOps & Tools:** Git, Docker, Docker Compose, GitHub, GitLab, Postman
- **Spoken Languages:** Spanish (Native), English (B2)

EDUCATION

B.S. in Computer Systems Engineering

Tecnológico Nacional de México – Instituto Tecnológico de Chihuahua II · Chihuahua, MX · 2023 – Present · Expected graduation: Summer 2027

EXPERIENCE

Software Developer — IKA

Remote · Aug 2023 – Present

- Develop and maintain ikafen, a quality and audit management web platform (documents, audits, agreements, and evidence) built with Angular, Spring Boot, NestJS, and PostgreSQL.
- Led ikafen 2.0, now in production: a full redesign plus an in-house library of 40+ Angular components (tables, dialogs, selects, date picker, trees, file upload) that replaced PrimeNG and Nebular across 90+ views, migrated with automated codemods.
- Built a token-based theming system (dark mode and accent colors) and accessibility improvements: keyboard navigation, labeled icon buttons, and reduced-motion support.
- Developed a customizable drag-and-drop dashboard with key metrics and persistent per-user layouts.
- Created an email template editor and a dynamic media system for managing content without code changes.
- Deployed a multi-service architecture with Docker Compose (Angular, Spring Boot, NestJS, PostgreSQL).
- Designed and built the product's marketing site (ikafen.com) with Next.js, Tailwind CSS and Framer Motion, with CI/CD to the production server.

ACADEMIC & PERSONAL PROJECTS

MIRU clinicAI – Multi-clinic SaaS with AI Agent

TecNM Dual-Education Project (real-world company project, team) · Jul 2026 – Present

- Contribute to a multi-tenant SaaS platform for dental clinics (scheduling, patient records, odontogram/periodontogram, prescriptions, quotes, finances and logs) with per-clinic isolation via PostgreSQL Row-Level Security.
- Decoupled backend built with Hono + OpenAPI (Node.js/TypeScript) as the sole gateway to the database; Next.js frontend; fully containerized with Docker.
- Automated CI/CD with GitHub Actions: build, typecheck and tests (Vitest + PostgreSQL) on every PR, and deployment to Railway with staging and production environments, running database migrations before each release.
- Integrated a WhatsApp agent that books appointments and sends reminders and campaigns, plus a Claude plugin with an MCP server that operates the clinic through the API using per-clinic service tokens.

SYNERGOS – Construction Management & Automation System

Personal Project · 2026 – Present · Live Demo (user: demo1234 / password: 12345) · GitHub (private)

- Designed and developed a multi-tenant web platform for construction companies with 14 modules: projects, budgeting and finance, inventory, personnel and payroll, procurement, subcontractors, communications, documents, tax compliance, blueprints, construction progress, data backup, support, and users/organizations.
- Migrated the backend from FastAPI to Java/Spring Boot using Clean Architecture and hexagonal architecture, preserving the functionality of 14 business modules and implementing 416 automated tests.
- Next.js 16 frontend with auto-generated TypeScript SDK from the backend's OpenAPI schema; PWA with VAPID push notifications.
- Technologies: Java, Spring Boot, Next.js 16, FastAPI, PostgreSQL, Docker Compose, Radix UI, Zustand

Better Than Yesterday (BTY) – Personal Life Dashboard

Personal Project · 2025 – Present · Live Demo (select "Ver demo sin cuenta" on the login page) · GitHub (private)

- Built a hybrid app (PWA + Android via Capacitor) centralizing gym tracking, nutrition, habits, and learning into a single personal dashboard.
- Implemented native Android services for the gym/running module: a persistent foreground service (works with the app backgrounded or the phone locked), GPS tracking with glitch filtering, and Health Connect integration.
- Integrated Google Gemini AI for personalized content generation (recipes, English lessons) and automated TOEFL-style scoring with rubric-based feedback.
- Technologies: Next.js 16, Supabase, Capacitor, Google Gemini AI, Tailwind CSS
